

## Inserting a microSD Card

When a commercially available microSD card is inserted, recordings can still be made to the card when the remaining recording time on the hard disk (HDD) runs out.

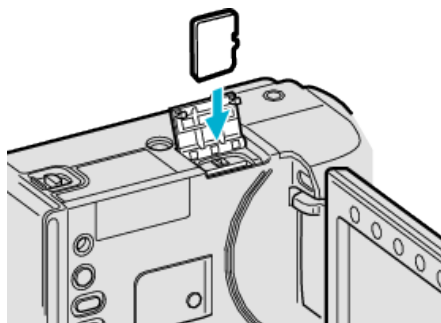

1 Press the power button for more than 2 seconds to turn off this unit.

2 Open the card slot cover.

3 Insert a microSD card.

- Insert with the metal contact area facing outward.

### Warning

- Make sure not to insert the card in the wrong direction. It may cause damage to the unit and card.
- Turn off the power of this unit before inserting or removing a card.
- Do not touch the metal contact area when inserting the card.

### NOTE:

- To record to the card, it is necessary to adjust media settings. When no card is available, set media settings to "HDD" for recording.
- To use cards that have been used on other devices, it is necessary to format (initialize) the card using "FORMAT SD CARD" from media settings.

## Removing the Card

Push the card inward once, then pull it out straight.
