

Using Focus Assist

Focused subject is outlined in color for more precise focus.

- 1 Tap "MENU".

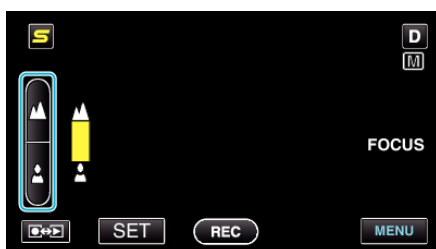

- 2 Tap "FOCUS ASSIST".

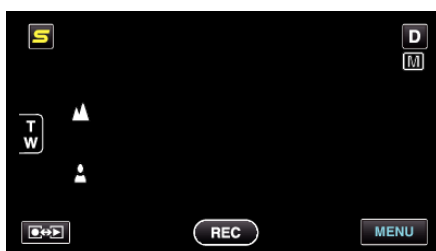

- Tap \wedge or \vee to move upward or downward for more selection.
- Tap \times to exit the menu.
- Tap \hookrightarrow to return to the previous screen.

- 3 Adjust the focus.

- Tap \blacktriangle to focus on a distant subject.
- Tap \blacktriangle to focus on a near subject.

- 4 Tap "SET" to confirm.

Memo :

- The image becomes black and white while the outline of the focused object is displayed in the selected color. Change outline color if it becomes difficult to see.
